## 2024\_28\_III\_OOPS Using Java Lab

### 2028\_REC\_OOPS using Java\_Week 10\_Q1

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### **Section 1 : COD**

##### **1. Problem Statement**

A city traffic management system needs to track vehicles entering a toll booth. Each vehicle is uniquely identified by its registration number. The system should allow adding vehicles to a record, ensuring that no duplicate registration numbers exist. The vehicles should be stored in a HashSet, which does not guarantee any specific order.

Your task is to implement a program using a HashSet that allows adding vehicle details and displaying the records.

##### ***Input Format***

The first line of input contains an integer N - the number of vehicles.

The next N lines contain details of each vehicle in the format: "RegNumber

OwnerName VehicleType"

1. RegNumber (String) - A unique registration number (Alphanumeric).
2. OwnerName (String) - The name of the vehicle owner.
3. VehicleType (String, Car, Bike, or Truck) - The type of vehicle.

If a vehicle with the same registration number is already present, ignore the duplicate entry.

### ***Output Format***

The output prints the unique vehicle records in any order (since HashSet does not maintain order).

Output format: "RegNumber OwnerName VehicleType"

Refer to the sample output for formatting specifications.

### ***Sample Test Case***

Input: 5

KA01AB1234 John Car

MH02CD5678 Alice Bike

DL03EF9012 Bob Truck

TN04GH3456 Mike Car

KA01AB1234 John Car

Output: TN04GH3456 Mike Car

KA01AB1234 John Car

MH02CD5678 Alice Bike

DL03EF9012 Bob Truck

### ***Answer***

```
// You are using Java
```

```
import java.util.*;
```

```
// Vehicle class to represent each vehicle record
```

```
class Vehicle {
```

```
    private String regNumber;
```

```
    private String ownerName;
```

```
    private String vehicleType;
```

```
// Constructor
public Vehicle(String regNumber, String ownerName, String vehicleType) {
    this.regNumber = regNumber;
    this.ownerName = ownerName;
    this.vehicleType = vehicleType;
}
```

```
// Getters
```

```
public String getRegNumber() {
    return regNumber;
}
```

```
public String getOwnerName() {
    return ownerName;
}
```

```
public String getVehicleType() {
    return vehicleType;
}
```

```
@Override
```

```
public boolean equals(Object obj) {
    if (this == obj) return true;
    if (obj == null || getClass() != obj.getClass()) return false;
    Vehicle vehicle = (Vehicle) obj;
    return regNumber.equals(vehicle.regNumber);
}
```

```
@Override
```

```
public int hashCode() {
    return Objects.hash(regNumber);
}
```

```
@Override
```

```
public String toString() {
    return regNumber + " " + ownerName + " " + vehicleType;
}
```

```
}
```

```
public class Main {  
    public static void main(String[] args) {  
        Scanner sc = new Scanner(System.in);  
        int n = sc.nextInt(); // number of vehicles  
        sc.nextLine(); // consume newline  
  
        Set<Vehicle> vehicleSet = new HashSet<>();  
  
        for (int i = 0; i < n; i++) {  
            String regNumber = sc.next();  
            String ownerName = sc.next();  
            String vehicleType = sc.next();  
  
            Vehicle v = new Vehicle(regNumber, ownerName, vehicleType);  
            vehicleSet.add(v); // duplicate regNumber will be ignored automatically  
        }  
  
        // Display all unique vehicles (order not guaranteed)  
        for (Vehicle v : vehicleSet) {  
            System.out.println(v);  
        }  
  
        sc.close();  
    }  
}
```

**Status :** Correct

**Marks :** 10/10
